Meeting report

Meeting	5 – Measure analysis
Date	Wednesday, November 3, 2010
Time	16:40
Venue	C00.14
Attendees	Roche Jean-François, Valentin Clément, Jonathan Stoppani

Discussed issues

1. To specify a remote code location, the full address can be inserted directly into the obj.map file. At present the supported protocols are HTTP and FTP;

2. The `inoutfitness` parameter gives a score to each result, in order to take the bast match to execute the object;

3. The fact that the `maxjobs` parameter is not contemplated in research is a shortcoming of the current implementation and will be fixed;

4. The code part in the BindStatus response has no meaning (wrong: used by proxies);

5. The protocol negotiation is now described in the relative documentation section.

Open points

1. Find out the need for the `classuid` parameter;
